Levine Cancer Institute: *Changing the Course of Cancer Care*

Atrium Health's Levine Cancer Institute creates access to breakthrough research, state-of-the-art treatment, and nationally-renowned physicians—including experts who subspecialize in diagnosing and treating aggressive types of cancer. The Institute's unique delivery model distributes care across a network of more than 25 locations, ensuring that a patient's location is not a barrier to receiving the highest quality care.

Through advanced technology, including webcasted teleconferences and virtual tumor boards, physicians located throughout Levine Cancer Institute's network are able to collaborate on best practices and treatment guidelines. The Institute has a specialized Phase 1 clinical trials unit to advance the study and implementation of novel cancer therapies. The Institute's robust survivorship program provides evidence-based clinical care, education and support for patients and their families from diagnosis to recovery.

About The Carolinas Melanoma and Immunotherapy Fund

Immunotherapy, also called biologic therapy, uses the body's own defense system to recognize and destroy cancer cells. It has been used to effectively treat melanoma. Since its inception in 1994, the Immunotherapy Program has grown to the point that it treats over 250 new patients each year. A team of highly trained Atrium Health physicians, nurses, research clinicians, nutritionists, and counselors provides the highest level of care to these patients. The Carolinas Melanoma and Immunotherapy Fund supports ongoing immunotherapy research, as well as melanoma awareness, outreach, and prevention programs.

FAST FACTS

GOLFING FOR MELANOMA RESEARCH & AWARENESS

- ☀ Skin cancer is the most common cancer.
- ☀ More skin cancers are diagnosed in the United States each year than all other cancers combined.
- ☀ Melanoma accounts for only about 1% of skin cancers but causes a large majority of skin cancer deaths.
- ☀ An estimated **100,350** new cases* of melanoma will be diagnosed this year.
- ☀ The rates of melanoma have been rising for the last 30 years.
- ☀ It is one of the most common cancers in young adults, especially in young women.
- ☀ The risk of melanoma increases as people age.

The most important way to lower your risk of melanoma is to protect yourself from exposure to UV rays. Practice sun safety when you are outdoors. Simply staying in the shade is one of the best ways to limit your UV exposure. If you are going to be in the sun, wear protective clothing, use sunscreen, wear a hat and sunglasses.

**PREVENTION IS THE BEST DEFFENSE AGAINST
THE DISEASE! PRACTICE SUN SAFETY WHEN
YOU ARE OUTDOORS.**

**Estimated by the American Cancer Society*
